

Lecture #14 Most of this from Kathy McKeown (I left her format for her slides) November 2012 Web-based Factoid Question Answering (including a sketch of Information Retrieval)

lides adapted from Dan Jurafsky, Jim Martin and Ed Hov

People do ask questions...

Examples from various query logs

Which english translation of the bible is used in official Catholic liturgies?

How tall is the sears tower?

How can i find someone in texas

Where can i find information on puritan religion? What are the 7 wonders of the world

How can i eliminate stress

What vacuum cleaner does Consumers Guide recommend

UT Dallas Q/A Systems This system contains many components used by other systems, but more complex in some ways Most work completed in 2001; there have been advances by this group and others since then. Next slides based mainly on: Paşca and Harabagiu, *High-Performance Question Answering from Large Text Collections*, SIGIR'01. Paşca and Harabagiu, *Answer Mining from Online Documents*, ACL'01. Harabagiu, Paşca, Maiorano: Experiments with Open-Domain *Textual Question Answering*. COLING'00

Query Formulation: Lexical Terms Extraction

 Questions approximated by sets of unrelated words (lexical terms)

| Similar to bag-of-word IR models | | |
|--|---|--|
| Question (from TREC QA track) | Lexical terms | |
| Q002: What was the monetary value of the Nobel Peace Prize in 1989? | monetary, value, Nobel, Peace, Prize | |
| Q003: What does the Peugeot company manufacture? | Peugeot, company, manufacture | |
| Q004: How much did Mercury spend on advertising in 1993? | Mercury, spend, advertising, 1993 | |
| Q005: What is the name of the managing director of Apricot Computer? | name, managing, director, Apricot, Computer | |
| | | |

Some examples

- Q: What is the population of Venezuela?
 Patterns (with Precision score):
 - 0.60 <NAME> 's <C-QUANTITY> population
 - 0.37 of <NAME> 's <C-QUANTITY> population
 - 0.33 <C-QUANTITY> people in <NAME>
 - 0.28 <NAME> has <C-QUANTITY> people
- **3.2** Q: What is the population of New York?
 - S1. The mayor is held in high regards by the 8 million New Yorkers.
 - $\cdot\,$ S2. The mayor is held in high regards by the two New Yorkers.

Where to find the answer? • Wikipedia, WordNet often more reliable

- Wikipedia:
 - Q: What is the Milky Way?
 - Candidate 1: outer regions
 - Candidate 2: the galaxy that contains the Earth

WordNet

Wordnet: Milky Way—the galaxy containing the solar system

Where to find the answer? Wikipedia, WordNet often more reliable Wikipedia: Q: What is the Milky Way? Candidate 1: outer regions Candidate 2: the galaxy that contains the Earth WordNet WordNet Wordnet: Milky Way—the galaxy containing the solar system

An Online QA System • http://tangra.si.umich.edu/clair/NSIR/html/n sir.cgi

Is the Web Different? The Web is Different • On the Web popular factoids are likely to be In TREC (and most commercial expressed in a gazzilion different ways. applications), retrieval is performed At least a few of which will likely match the against a smallish closed collection of way the question was asked. texts. So why not just grep (or agrep) the Web using The diversity/creativity in how people all or pieces of the original question. express themselves necessitates all that work to bring the question and the answer texts together. • But...

AskMSR

- Process the question by...
 Simple rewrite rules to rewriting the original question into a statement
 Involves detecting the answer type
- Get some results
- Extract answers of the right type based on
 How often they occur

| AskMSR | | |
|---|---|---|
| Question Where is the Louvre Museum located? in Paris France 59% museums 12% hostels 10% | *He Louvre Museum +is located" *Hhe Louvre Museum +is +in" *Hhe Louvre Museum +is near *Hhe Louvre Museum +is" Louvre AND Museum AND near | → <search engine=""> ↓ Collect Summaries, Mine N-grams</search> |
| N-Best Answers | Tile N-Grams | Filter N-Grams |

Step 4: Filtering N–Grams Each question type is associated with one or more "data-type filters" = regular expressions for answer types Boost score of n-grams that match the expected answer type. Lower score of n-grams that don't match. For example The filter for How many dogs pull a sled in the lditarod? prefers a number So disprefer candidate n-grams like Dog race, run, Alaskan, dog racing Prefer candidate n-grams like

Pool of 16 dogs

- Much of the work has focused on getting the answer from multiple documents
 - Do web search and use snippets (each as a document)
 Do question-answering from many documents and merge
 - Do question-answering from many documents and merge together the answers you get from multiple sources
 - Like multi-document summarization you want new information and want to avoid redundant information

44

- Use "templates" for each type of question e.g., definition, biography, medicine
 - Use information extraction techniques to find answer

Information Retrieval Basic assumption: meanings of documents can be captured by analyzing (counting) the words that occur in them.

> This is known as the bag of words approach.

Inverted Index

- The fundamental operation we need is the ability to map from words to documents in a collection that contain those words
- An inverted index is just a list of words along with the document ids of the documents that contain them
 - Dog: 1,2,8,100,119,210,400
 Dog: 1:4,7:11,13:15,17

Stop Lists and Stemming

- IR systems use them
- Stop List
- List of frequent largely content-free words that are not stored in the index (of, the, a, etc)
 The primary benefit is in the reduction of the size of the
- inverted index
- Stemming
 - Are dog and dogs separate entries or are they collapsed to dog?

Phrases 9. Coogle et al allow users to perform phrasal searches "big red dog". 9. Hint: they don't grep the collection 9. Add locational information to the index 9. dog: 1{104}, 2{10}, etc 9. red: 1{103},... 9. big: 1{102},... 9. Phrasal searches can operate incrementally by piecing the phrases together.

Vector Space Model

- In the vector space model, both documents and queries are represented as vectors of numbers.
- The numbers are derived from the words that occur in the collection

Ad Hoc Retrieval

- 1. Take a user's query and find all the documents that contain any of the terms in the query
- Convert the query to a vector using the same weighting scheme that was used to represent the documents
- Compute the cosine between the query vector and all the candidate documents and sort

Text Summarization: News and Beyond

Kathleen McKeown Department of Computer Science Columbia University

What is Summarization?

- Data as input (database, software trace, expert system), text summary as output
- Text as input (one or more articles), paragraph summary as output
- Multimedia in input or output
- Summaries must convey maximal information in minimal space

Types of Summaries

- Informative vs. Indicative
 - Replacing a document vs. describing the contents of a document
- Extractive vs. Generative (abstractive)
 Choosing bits of the source vs. generating something new
- Single document vs. Multi Document
- Generic vs. user-focused

64

Types of Summaries

- Informative vs. Indicative
 - Replacing a document vs. describing the contents of a document
- Extractive vs. Generative
 - Choosing bits of the source vs. generating something new
- Single document vs. Multi Document
- Generic vs user-focused

65

Questions (from Sparck Jones)

- Should we take the reader into account and how?
- "Similarly, the notion of a basic summary, i.e., one reflective of the source, makes hidden fact assumptions, for example that the subject knowledge of the output's readers will be on a par with that of the readers for whom the source was intended. (p. 5)"
- Is the state of the art sufficiently mature to allow summarization from intermediate representations and still allow robust processing of domain independent material?

Single-Document Summarization Stages

- **1. Content Selection:** Choose units (sentences?) to extract from the document
- 2. Information Ordering: Choose an order in which to place these sentences in the summary
- 3. Sentence Realization: Clean-up the sentences, e.g., by removing non-essential phrases, by fusing multiple sentences, by fixing problems of coherence

67

Foundations of Summarization – Luhn; Edmunson

- Text as input
- Single document
- Content selection
- MethodsSentence selection
 - Criteria

Sentence extraction

- Sparck Jones:
- `what you see is what you get', some of what is on view in the source text is transferred to constitute the summary

Luhn 58

- Summarization as sentence extraction
 Example
- Term frequency determines sentence
 - importance
 - TF*IDF
 - Stop word filtering
 - Similar words count as one
 - Cluster of frequent words indicates a good sentence

TF*IDF

 Intuition: Important terms are those that are frequent in this document but not frequent across all documents

Term Weights

- Local weights
- Generally, some function of the frequency of terms in documents is used
- Global weights
 - The standard technique is known as inverse document frequency

N= number of documents; ni = number of documents with term i

TFxIDF Weighting

To get the weight for a term in a document, multiply the term's frequency derived weight by its inverse document frequency.

TF*IDF

Edmunson 69

Sentence extraction using 4 weighted features:

- Cue words ("In this paper..", "The worst thing was ..")
- Title and heading words
- Sentence location
- Frequent key words

Sentence extraction variants

- Lexical Chains
 - Barzilay and Elhadad
 - Silber and McCoy
- Discourse coherence Baldwin
- Topic signatures Lin and Hovy

Lexical Chains

- "Dr.Kenny has invented an anesthetic machine. This device controls the rate at which an anesthetic is pumped into the blood.
- "Dr.Kenny has invented an anesthetic machine. The doctor spent two years on this research."
- Algorithm: Measure strength of a chain by its length and its homogeneity
 - Select the first sentence from each strong chain until length limit reached
- Semantics needed?

Discourse Coherence

- Saudi Arabia on Tuesday decided to sign...
- The official Saudi Press Agency reported that King Fahd made the decision during a cabinet meeting in Riyadh, the Saudi capital. The meeting was called in response to ... the Saudi foreign minister, that the Kingdom... An account of the Cabinet discussions and decisions at the meeting...

- The agency...
- = Iť

77

Topic Signature Words

- Uses the log ratio test to find words that are highly descriptive of the input
- the log-likelihood ratio test provides a way of setting a threshold to divide all words in the input into either descriptive or not
 - the probability of a word in the input is the same as in the background
 - the word has a different, higher probability, in the input than in the background
- Binomial distribution used to compute the ratio of the two likelihoods
- The sentences containing the highest proportion of topic signatures are extracted.

Summarization as a Noisy Channel Model

- Summary/text pairs
- Machine learning model
- Identify which features help most

Julian Kupiec SIGIR 95 Paper Abstract

- To summarize is to reduce in complexity, and hence in length while retaining some of the essential qualities of the original.
- while retaining some of the essential qualities of the original. This paper focusses on document extracts, a particular kind of computed document summary. Document extracts consisting of roughly 20% of the original can be as informative as the full text of a document, which suggests that even shorter extracts may be useful indicative summaries. The trends in our results are in agreement with those of Edmundson who used a subjectively weighted combination of features as opposed to training the feature weights with a corrus.

We have developed a trainable summarization program that is grounded in a sound statistical framework.

Statistical Classification

Framework

- A training set of documents with hand-selected abstracts
 - Engineering Information Co provides technical article abstracts
 188 document/summary pairs
 - 21 journal articles
- Bayesian classifier estimates probability of a given sentence appearing in abstract

 - Direct matches (79%)
 Direct Joins (3%)
 Incomplete matches (4%)
 Incomplete joins (5%)
- New extracts generated by ranking document sentences according to this probability

Features

corpus.

- Sentence length cutoff
- Fixed phrase feature (26 indicator phrases)
- Paragraph feature
 - First 10 paragraphs and last 5 Is sentence paragraph-initial, paragraph-final, paragraph medial
- Thematic word feature Most frequent content words in document
- Upper case Word Feature
 - Proper names are important

Evaluation

- Precision and recall
- Strict match has 83% upper bound Trained summarizer: 35% correct
- Limit to the fraction of matchable sentences Trained summarizer: 42% correct
- Best feature combination
 - Paragraph, fixed phrase, sentence length
 - Thematic and Uppercase Word give slight decrease in performance

Questions (from Sparck Jones)

- Should we take the reader into account and how?
- "Similarly, the notion of a basic summary, i.e., one reflective of the source, makes hidden fact assumptions, for example that the subject knowledge of the output's readers will be on a par with that of the readers for whom the source was intended. (p. 5)'
- Is the state of the art sufficiently mature to allow summarization from intermediate representations and still allow robust processing of domain independent material?
